Growth, Trade & Whatever Else is Around the Corner

By Bob Beegle

Towing and offshore petroleum industries experienced many ups and downs over the last 37 years since Marcon International was founded in the midst of two early 1980s "double dip" U.S. recessions. In addition to normal down turns and booms, we all faced an early 1990s recession, early 2000s "dot-com bubble" recession and the latest and greatest year-and-a-half-long "Great Recession" which officially ended in June 2009. Most of us have struggled the last eight years with a lackluster, start & stop recovery wondering if there would ever be a light at the end of the tunnel. Probably only the economists made note of that June date as an official end.

Growth and trade are now off to good starts in 2018. The latest numbers indicate the light in that mythical tunnel may have arrived and the future appears great for global growth, trade and Marcon's sales. We have already seen a recovery from the record low of 16 vessel and barge sales and tows last year. In first quarter 2018, Marcon concluded 14 sales and one 2,780nm long-distance tow, with four additional sales pending. We hope this activity will continue, but have to admit that many were "blue light specials" and both Marcon and Sellers would have preferred to see higher prices.

2017's 3.8% global growth was the highest enjoyed since 2011. The International Monetary Fund (IMF) in April forecast growth to reach 3.9% both this year and in 2019 before falling to a still respectable 3.7% in 2023. U.S real gross domestic product (GDP) increased at an annual rate of 2.3% in first quarter 2018, after a 2.3% growth in 2017. The U.S. is projected to achieve 2.9% growth this year before slipping slightly to 2.7% in 2019 and declining to 1.5% in 2023. To put these numbers in perspective, average 2000 – 2009 growths globally and in the U.S. were 3.9% and 1.8% respectively, and the highest growth rates were 5.4% worldwide in 2010 (an "I've been down so long it looks like up to me" moment) and 2.9% for the United States in 2015. We have not seen growth this broad-based or strong since the initial 2010 bounce-back from the 2008-09 financial crisis.

Since mid-2016, the growth in volume of world trade (excluding services) also improved. Trade growth was 5.4% in 2017, out-performing global GDP for the first time since 2013. Historically, world merchandise trade volumes have grown around 1.5 times faster than world real GDP. The ratio of trade growth to GDP growth rose above 2.0 in the 1990s, but fell back to 1.0 in the five years following the financial crisis (2011-2016). This rebounded from 0.8 in 2016 to 1.5 in 2017, which is close to the historical average. Strong trade growth relative to GDP growth is expected to continue at least into 2018, barring major economic shocks, but even before we get to enjoy the growth we are reading about, some economists see "darker clouds looming".
