Subchapter M Compliance

By René A. Cheramie

There are two options for documenting compliance with the requirements for Subchapter M to obtain a U.S. Coast Guard (USCG) Certificate of Inspection (COI) for a towing vessel. There's the USCG option, in which all inspections of the towing vessel are conducted by the USCG. There is also the Towing Safety Management System (TSMS) option. Regardless of the option chosen, the USCG is responsible for issuing a towing vessel COI, and may board a vessel at any time to verify compliance and take appropriate action. Owners or managing operators may choose different options for the individual vessels within their fleets. In this article, we explore the TSMS option.

Towing vessel owners or managing operators who select the TSMS option to demonstrate compliance with 46 CFR Subchapter M must complete management and vessel audits to assess compliance with their TSMS, obtain a TSMS Certificate and complete surveys to demonstrate vessel compliance with 46 CFR subchapter M. Functions related to completing audits, issuing a TSMS certificate and completing surveys are carried out by a third-party organization (TPO) or an organization that can perform the work of a TPO.

What is a TSMS? Management based systems such as a TSMS must meet the regulatory criteria while at the same time reflect reality and be accepted and fully implemented by the crews. If not, they can lead to significant fines and be used as "checklists for negligence" against the company or the crew during litigation. The USCG uses the form CG 835 for vessels subjected to obtaining and maintaining a USCG COI. The process in developing a TSMS includes recommended policies and procedures, review by key employees ashore and afloat, consensus and revision of all policies and procedures, and distribution of manuals. A TSMS means a structured and documented system enabling company personnel to implement effectively the company safety and environmental protection policy. The regulatory criteria can be found in Subchapter M or the ISM Code.

There are various options for drafting a TSMS. It could be prescriptive or non-prescriptive. Say what you will do and then do what you say. Many companies have purchased a canned product and then apply their operation to the canned product. In my opinion, this approach sets the company up for failure. By performing a needs assessment, creating a gap analysis and incorporating that into the company operation, using subchapter M as the guiding principles, the company is able to make a custom TSMS better suited to their operations. There are many good products out on the market, but when a company uses a deliberate process in drafting the TSMS, they will be in a better position to determine if they should use a more prescriptive and robust system as opposed to a less prescriptive system.
