#### Old Boats: New Solutions

Alan Haig-Brown

As construction costs escalate and demand for maneuverability increases, several docking firms have opted to retrofit azimuthing thrusters to existing single screw tugs. Firms in position to gain contracts through cost and time sensitive bidding may want to look at the success established companies have had with combi-tugs. Well maintained single screw boats 3-5 decades old are readily available. Of 489 tugs Marcon has for sale, 60% U.S. and 42% foreign are single screw.

The twin Ports of Long Beach & Los Angeles, among the largest in the world, are a highly competitive tug market. With Crowley and Foss offering cycloidal and z-drive tugs, Wilmington Transportation, was well established with conventional tugs. As part of a program to keep up with competition they leased the 3000hp Z-peller "Eddie C" thru Marcon and updated the single screw "San Pedro". While not the first to add an azimuthing thruster, this project drew a lot of attention. Accolades came from Wilmington captains who maintained that it gave them maneuverability equal to twin screw while allowing them to perform shipdockings virtually on par with tractors. Some Long Beach pilots concur, saying that cycloidal, Z-drives and refurbished "combi-tugs" are all fully capable of handling most assignments. On the east coast, Moran Towing was paying attention. With a 54 boat fleet (including 20 single screw tugs) they provide services in several ports. In '96, Moran went to architect Paul Gow of PK Marine, for plans to add thrusters. For a fraction of the \$5-10 million cost of new tractors they began adding bow drives. Unlike Wilmington who used a non-retractable Aquamaster, Moran chose fully retractable Ulsteins. Conversion of "Sewalls Point" in '95, followed by "Harriet Moran", "Drum Point" & "Town Point" increased total power from 2365 to 3005hp plus a full 360° view pilothouse, low profile funnel, upgraded fendering & stern deck fittings. All operate in New York, Virginia and Florida with excellent results. Pilots and captains report favorably on maneuverability & increased power. Both Wilmington and Moran conversions were preceded by nearly a decade in Mobile where St. Philip Towing installed a 600hp azimuthing thruster on 2800hp "Thomas St. Philip" in '86. Her captain said she was "a captain's dream..., I like it better than twin screw". Now owned by Hvide (DBA Mobile Bay Towing), the vintage tug was renamed "Mobile Power". Another "combi" with a 600hp retractable Aquamaster is the 3600hp "Delaware" built in '55. Her large foc'stle easily converted to an engine room. Renamed "Mobile Point", both are working alongside Hvide's new ship docking module "New River".

In the U.K., Cory Towage feels this is a very cost effective method to upgrade service where high investment is not justified. Last fall they upgraded the 1981 2820hp "Flying Phantom" to improve performance. A single CPP in a kort was supplemented by an omni-directional, retractable Aquamaster 600 hp thruster. In addition, a hydraulic winch was fitted aft. Upgrading followed similar work carried out on "Point Gilbert" and "Bargarth". Not all conversions are for harbor work. Sause Bros. of Coos Bay, OR converted the 123' 2750hp "Roughneck" (built in '44) to maintain power and line tension in case of loss of the main engine when towing tandem. Another proven installation is on the Canadian "Ocean Clipper". Owned by Vancouver-based Rivtow Marine, the 1800hp 87' tug tows a 369' log barge up and down the strong tidal channels of B.C.'s inside passage. Owners installed an Aquamaster retractable thruster several years ago to supplement power from two CAT3512s driving a single prop. With drifting logs a threat, ability to retract the drive is important. The 400hp thruster can be lowered several feet below the keel and engaged in seconds. For docking, landing and tight maneuvers, the nozzle can be rotated 360° in 12-14 sec. Thruster alone will move light tug @ 4-5kn. When I traveled on the boat a couple of years ago, both skipper and engineer were ecstatic in their praise. "That's the best money ever spent," said skipper Rick Edwards, "When we lost power in Blackney Pass one trip, the thruster kept the barge off the beach. It made a real boat out of her. Before, even at dead slow on the mains, we were doing 4kn, I used to have the shaft brake just-a-smoking. Now she's a real pleasure to handle." The good success of these boats is affirmed by recent conversion of another Vancouver log-barging tug, "Haida Chieftain". Blue Band Navigation, added a retractable Aquamaster in '97 to this 145' ex-Navy tug built in '44. The proof of any such project is in the handling. Capt. Bill Weber, like the people at Wilmington, has nothing but good to say, "When they put the thruster in they did it right," he says, "It has a 900hp engine and I can lower the drive and have power to it in about two minutes. One captain had a situation with a log barge where it was 50kn of wind off Cape Mudge and couldn't make any headway. He put the bow thruster down and that extra power allowed him to buck up into the wind." It is really good if you're tied up loading and you break free, you can just run in the wheel house, drop it down and you're underway, where it would take ten minutes to get an engineer down in the engine room and the mains started. You could do about 4kn with a loaded 350'x60' barge and the thruster has enough power to about push even against the mains at half speed." Although not azimuthing, another early Canadian conversion was the "Pacific Challenger", an 173' whaler built in Norway and rebuilt to a tug in '71 with a 3600hp EMD and fixed
