### Winter 1998

**\$18.00 U.S., Canada & Mexico: One Year**  
**\$22.00 Other Countries: One Year**

#### Marine Construction Faces Spoil Disposal Challenges

Alan Haig-Brown

Jim Irwin of Weeks Marine, with operations on East and Gulf coasts, Caribbean, So. America and Hawaii, finds a shortage of equipment resulting from heavy demand in the oil patch. "There's a shortage across the board of tugs, deck barges and crew boats. We're chartering both in and out." Brian Lindholm, VP Dredging, reported 5 of 10 dredges working. Laid up equipment is generally taken to facilities at New York, Camden or Bourg, LA for overhaul. In winter most work moves inshore so the firm currently has one hopper dredge employed building a beach at Longbranch, a 24" dredge dismantled and taken inland at Puerto Rico to enlarge a water reservoir, another working on levees near New Orleans and one of two 30" ocean dredges moved to the Delaware River to remove some of the 5 million cu.yd. of silt accumulating in the channels annually. Weeks recently completed dredging in New York where problems of spoils disposal similar to Oakland, CA add greatly to cost. "Where it was costing \$3 - 4 / yd. to dredge for marine disposal, it now costs upwards of \$50 for upland disposal," explains Lindholm. One alternative used in New York, was to excavate a 2 million cu.yd. hole in the clay bottom. Clean clay was used to cap an old ocean spoils site and then lightly polluted spoils dumped in the hole which was capped. This reduced costs to @ \$20/yd. Lindholm favors deeper ocean dumping over dry land sites as this would allow industry to build larger hopper scows that are more cost effective.

Dick Beard of Guy F. Atkinson Construction says his firm also deals with challenges of spoils disposal. If the contract is for the Army Corp. of Engineers or another agency, they will have done environmental permitting so the contractor will simply work to design criteria. Demand for equipment in the San Francisco Bay area is driven "by gearing up for seismic retro-fit contracts. There is a tremendous amount of work. Most requires barges and various types of pile driving. Sheet-piling will be driven into the ocean floor forming cells around bridge columns. Water will be pumped from the cells, allowing crews to build concrete forms around existing columns to beef them up to withstand higher seismic activity. In some cases it will be necessary to strip old concrete from existing steel, reinforcing with buttresses and heavier steel before adding more concrete. This is nearly all water based work and given the number of bridges in the area, it will place heavy demands on the industry". Dick Beard estimates that some seismic work will be required on "probably 95% of bridge

columns." A consortium of Morrison Knudsen, Weeks and Traylor Bros. has been granted the contract for seismic stabilization of the San Mateo Bridge at a reported price just over \$100,000,000. Work on other retro-fit projects will see over \$1 billion spent in coming years. The Martinez-Benicia Bridge project is advertised to bid in January.

Guy F. Atkinson is working on shore based contracts in South America, Asia and North America as well as an ongoing project on the Ohio River. They are half way through a 6 year contract rebuilding the Olmstead Lock and dam, subcontracting most tug and barge requirements. "We had to build a large cell on the Ohio and a new lock to replace an old one that had become silted up," says Dick Beard, "We use hopper barges to supply our batch plant and flat steel barges for excavation needs. The project is to replace Locks 51 and 52. There is also work on the drawing boards to replace locks further north."

Work in California from expansion in the Ports of Los Angeles/Long Beach to dredging in San Francisco Bay is placing demand on the west coast reserve of dump scows. Dick Brannon of Seattle-based American Construction, recent winners of a contract to build Hyundai's new Tacoma pier, says that there is a hesitation on part of industry to spend millions of dollars to build scows of a specific application, especially when many contracts call for hydraulic dredging which doesn't require them.

Wayne Sutherland, a consultant with Dutra Dredging who are nearing completion of their '94 contract to deepen the Port of Oakland, explains the project was bid on a cubic yard unit cost, originally scheduled to move 5.5 million cu.yds. to upland and ocean dump sites. They have moved about 2 million yds. over the original estimate and negotiations are underway for contract adjustments. Sutherland estimates another 0.5 million yds. will be removed prior to achieving the intended 43' depth the first quarter of '98. One upland disposal site, an old landfill being reclaimed as a golf course, was 4 miles inland. This required loading spoils into scows towed to where a hydraulic pump could access the site. Sutherland explains that gaining the Oakland contract along with work on the East Coast and in Los Angeles gave them impetus to build 5 new dump scows at a cost of \$3.5 - 4 million each. Three scows have a 5,000 cu.yd. capacity and two are 5,800 yd. In '94 bid dollars the company costed the ocean disposal of spoils at \$5.50 - 8.00 / yd. Dredging has been challenged first by sediment containing a large amount of industrial garbage, then as they encountered virgin bottom the old bay mud proved dry and difficult to work with hydraulic equipment.
