### SPRING 1999

**\$18.00 U.S., Canada & Mexico: One Year**  
**\$22.00 Other Countries: One Year**

#### Y2K

Robert L. Beegle

Along with most companies worldwide, Marcon is reviewing all of our equipment for any Y2K problems. We believe that the impact on our own company will be minimal compared to most, relating primarily to our computers & communications. Those companies with operating vessels/barges and sophisticated equipment in the "oil patch" definitely have a lot more than Marcon to research and take care of. As an example, one tug operator has found up to 50 embedded chips in the navigation equipment on some of their vessels. The affect will vary dramatically as to the type, sophistication and age of the vessel.

The key is to first systematically identify all equipment and software which may be affected and replace the equipment or correct the problem by swapping out the specific chips. Sounds simple, but doing it is more complicated as in some cases the same model of equipment can have different embedded chips. We have created a check-list of everything "in-house" that could even be remotely affected and for the past year have been checking the compliance with the vendor or manufacturer. In some cases we are even testing the equipment in advance by changing the date, but this has to be researched and done carefully so that we do not cause more problems.

Most of our computer hardware is Y2K compliant, but we had to replace BIOS chips in many of our desk top work stations costing about \$100 apiece. Some of our software is questionable and we are already in the process of upgrading to new compliant databases which will be completed by June '99. In January we also installed a new RAID server with four 18 gigabyte and two 9 gigabyte hard drives to replace our old optical disk "jukebox". Besides being millennium compliant, this has sped up our internal access of files dramatically. Total cost of Y2K corrections for our office are expected to be under US\$ 10,000 excluding previously planned improvements.

Except for the computers, we believe that any problems we encounter will be very limited. There could be short-term power outages, but we are used to that with the winter storms and will have a back-up generator available to handle essential services. We would also not be surprised to see problems for a week or so with credit card authorizations. Murphy's Law will definitely come into play and when it is all over there will have been some unique problems that no one ever expected. Some could have serious impact on those unprepared companies, but many more will probably end up being a source of comedian's routines and movie plots for years to come. People are definitely adaptable and We am sure that we can figure out

ways around the problems as they arise – as we have in the past with disasters such as hurricanes, fires and even wars. If companies take reasonable precautions and have back-up systems and methods in place both ashore and at sea, the problems encountered hopefully will be minimal and nothing to head for the hills for.

According to U.S. government expert, John Koskinen, chairman of President Clinton's Council on Y2K, the shipping industry is a long way behind the air industry in solving the problem. Many ports such as Rotterdam Port Authority and the Port of Hong Kong advise that ships using their facilities in the coming year be millennium compliant. There is the possibility of refusal to enter into, depart from or move within many ports without proof that Y2K problems have been resolved. The U.S. Coast Guard is also requesting comments on ways to minimize potential equipment and system malfunctions aboard vessels at port facilities and marine terminals including rigorous equipment and systems testing, assessment & certification and restricting access to U.S. ports during peak Y2K risk periods.

We have prepared an internet version of this article and how it may affect shipboard propulsion, control, electronics, safety, monitoring systems, software, etc. in the offshore petroleum, towing and marine construction industries. This internet version is an "on-going" article regularly updated with new information as it comes available.

We have contacted vendors and manufacturers along with various vessel operators for their experiences and will continue to update the article with their responses. This is not intended to be the "end-all" in resources on the Y2K problem, as we do not have the time to put that all together. We have to concentrate on our main business of selling and chartering vessels and barges. There are many resources available to vessel operators worldwide. Lloyd's Register, for example, has issued a guide for shipboard Y2K projects which is available free to all shipowners and managers regardless of the class of their vessels. BIMCO has also drafted a Standard Year 2000 Clause for Voyage and Time Charter Parties addressing Y2K Compliance obligations of Charterers and Owners based on this being a seaworthiness issue.

We hope though that the information contained on the website, manufacturer's contacts, other links, articles, etc. are of assistance. The information should be checked out carefully by any user by contacting their vendor or manufacturer. Hopefully after Spring 2000 we will all be able to devote this time and effort into more profitable endeavors.

## Vessels for Sale and Charter Tug Boats
