#### THE SEISMIC MARKET IN REVIEW

Over the past several months, since our last report on the marine seismic market (in mid-2000), the general oilfield service sector has significantly rebounded from the lows of the late nineties. The revival of utilization followed the rebound in oil prices with a lag of less than one year. Supply vessels, anchor-handlers, offshore tugs, and drilling rigs have all seen their respective daily hire rates go up. In some sectors, rates have rebounded to levels above the highs of 1997. This is especially true in the US Gulf of Mexico, but in general, worldwide rates have come back and utilization has slowly returned to profitable levels. OPEC's apparent successful upward influence on oil prices since the bottom in 1998, seems to continue, even with the slowing economies of the US and other first-world trading partners. As we saw in 1998 with the dramatic economic problems in the Far East, it doesn't take long for oil supply to overcome demand in a slowing economy and thereby decimating oil prices. OPEC's recent successful anticipation of market demand and adherence to production limits has so far protected the oil service sector from the slowing economy of the world's largest oil consumer, the US.

Although the seismic market has come off its lows of 1998, the activity in the market has not reached the levels of prior up cycles. The market turnaround for the seismic sector usually lags the rest of the service sector, but the market is not usually impacted as badly as what transpired in the last market downturn. In general, any increase in drilling almost immediately increases demand for supply vessels and tugs. This is not the case with seismic vessels. Swings of historic proportions in the price of crude oil (up or down), like the market witnessed in 1998 and 1999, have an almost immediate impact on rigs, supply boats, and other support vessel rates and utilization. The historically low oil market of the late nineties seems to have softened the long-term outlook of oil majors and independents, making them more conservative. When oil prices rebounded to normal (profitable) levels, drilling gradually resumed, thereby bringing up the supply boat and towing sector with it. At the same time, the seismic sector has come off its lows, but has not enjoyed the same robust rebound.

Possible factors holding back the seismic market from a full recovery are the subject of much speculation. Some say oil companies already have an adequate backlog of prospects waiting to be drilled or the marine seismic market has too many vessels with better capabilities than in the past. These points may be true, but to what degree? One other possibility is that although oil prices have so far remained strong, primarily based upon OPEC's successful price controls, the economies of the US and other first-world countries have continually declined almost in an inversely proportional correlation. As other industries boomed & equity markets skyrocketed in the late nineties, oil

was at historic lows. When oil gradually regained some footing, the strongest sectors of the economy began their downward descent. Just as the equity markets in the US plummeted in the 1st quarter of 2000, the oil service sector was poised for a rebound, although it did not show up in rates until the 4th quarter of 2000 and 1st quarter of 2001. Although the higher oil prices may only be one cause of the slower economy, the slower economy could be the only cause necessary for future lower oil demand and prices. This may be what is holding the oil companies back from moving faster with regard to exploration.

Although only time will tell, the current divergence between the general offshore service vessel market and the marine seismic market, may have its roots in general economics, not only the strategic decisions of seismic companies. If you consider drilling activity and supply vessel activity as short-term markets with their roots based on current or six-month oil prices, and seismic activity as having its roots in estimated long-term oil prices or demand, this could explain the current market. At this time, oil prices are high; primarily due to OPEC's influence, not a substantial increase in overall oil demand worldwide. The main oil consuming economies are slowing, and the mid to long-term demand for oil is unclear. Oil majors may be reluctant to go full ahead with exploration budgets until both the economy and the price of oil can be counted on. The majors have shown they are willing to up production in a high-price-only environment, but they have not been as forthcoming when considering new seismic ventures. If this analysis is valid, perhaps the oil companies are either playing the market conservatively to see where the first-world economies go or they anticipate some negative effect from the general economic slowdown to be had on oil demand and prices over the next few years that cannot be overcome by OPEC's influence.

In conclusion, once we make it through this current general economic slowdown and both oil demand and prices are headed upward with the general economy, this will signal a rebound in the seismic market, as well as continued good times in the other offshore service vessel and drilling sectors. There may be a downturn or continued lull before the seismic market recovers due to a worldwide decrease in oil demand, which may or may not significantly effect oil's market price. Once there is more to support oil prices than only the discipline of OPEC, oil companies should begin to have a more long-term approach to the market, thus increasing spending on seismic. Until that happens, the market will most likely continue its satisfactory, but lackluster performance. We remind our readers that this article is the opinion of the author. We welcome your comments and opinions as well. (This is an abridged version of the THE SEISMIC MARKET IN REVIEW. A complete version may be accessed at [www.marcon.com](http://www.marcon.com) under "Newsletters".)
