## Energy Finances 2003

The U.S. Energy Information Administration released a report that reviews recent financial performance of major U.S. oil and gas companies for April through June 2003. Oil and natural gas producers led the way in earnings growth for the 45 independent energy companies included in the report, as earnings for independents as a whole grew 113% in the second quarter of 2003 over earnings in the second quarter '02. All three groups -- independent oil & natural gas producers, oil field service companies, and refiner/marketers -- showed substantial income growth. This across-the-board growth in profits over the year-ago quarter was due to improvements in all three major financial variables driving the performance of these companies: a sharp increase in the price of natural gas of 67.6%, a modest increase in the price of crude oil of 7.9%, and a substantial increase in refinery margins of 35.6%. A small increase in oil prices is accompanied by a much larger increase in natural gas prices, relative to prices of a year ago. The world oil price, represented by the U.S. refiner average acquisition cost of imported crude oil, increased, but only 8% relative to a year ago, going from \$23.84/bbl in Q202 to \$25.73/bbl in Q203. As indicated in the latest Short-Term Energy Outlook of the Energy Information Administration, slight upward pressure was exerted on crude oil prices by a 2% expansion in the U.S. economy. Further, despite a 3% increase in world petroleum supply coupled with a 1% increase in world petroleum demand, world stock levels were lower than a year ago, putting additional upward pressure on world oil prices.

This was the fourth consecutive quarter crude oil prices increased relative to their year-earlier levels, after six consecutive quarters of falling or unchanged crude oil prices relative to a year earlier. In contrast, the average U.S. natural gas wellhead price increased 68% between Q202 and Q203. The first quarter winter weather of 2003 was both colder relative to the unusually warm year-earlier quarter, and much colder than normal, with Q103 heating degree days of 2297 compared to heating degree days of 2072 in Q102. The cold winter put upward pressure on natural gas demand, as did some oil to gas fuel switching due to the December 2002 Venezuela oil disruption and concerns over impending war in Iraq. These effects persisted into Q203. Neither natural gas supply nor historically high levels of natural gas in working storage during Q202 were sufficient to meet this demand, as can be seen by the historically low levels of natural gas in working storage in Q203.
