A Commentary on Current Market Conditions and the Outlook for the Remainder of 2003

In my last article titled "The US Gulf Market: When Will It Turn Around?" (published in our Fall 2002 Newsletter), I provided an anecdotal analysis of the current market and where things may be headed. At that time the market was slow and seemed to lack the motivation for a rebound. Oil was trading at a medium to high price and offshore markets around the world biased toward oil E & P were doing well. Markets biased toward natural gas were doing poorly (which included the US Gulf market). Since that article, oil has gone up substantially due to the lead up to the war with Iraq and has since settled back to pre-war levels. The natural gas market has staged a dramatic price increase from the summer of 2002 with prices doubling as reserves have fallen due to the lack of drilling. Given the market in the US Gulf is biased toward natural gas E & P, it stands to reason that drilling should stage a rebound. At this time, although the rig count has stabilized and shown some improvement, the utilization rates remain below historical norms associated with the current commodity price levels.

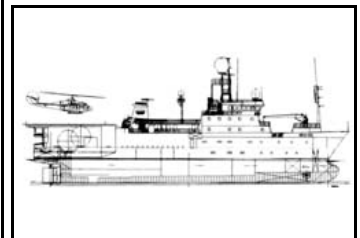

So, what is holding the market back? Why aren't oil companies rushing to meet the demand reflected in high natural gas prices? Why hasn't the rig utilization and resultant vessel utilization improved? I believe the market is coming off a long list of uncertainties. The economy has been slow, yet steady for the last 3 years, but has lacked a clear direction. Commodity prices have echoed this uncertainty. Although some of the major uncertainties have been removed during the first quarter of 2003, some major uncertainties remain. Given oil and natural gas prices are internationally driven, it is difficult to project their near-term levels. In the long-term, the trend in prices (averaged over a long period of time) is more predictable, but decisions of what to do in the next 6 to 12 months are not made based on long-term projections. Near-term decisions are made based on the more unpredictable short-term to medium-term commodity price levels. The decision to invest capital in new projects remains difficult given the current uncertainties. Also, the tendency to be more conservative given the price fluctuations in natural gas over the last few years, has created a negative momentum to error on the side of safety. Just as the market tended to error on the side of over-investment a few years ago, we are now in a cycle characterized by under investment. The only cure for this is stability. If commodity markets can demonstrate strength over the next several months as they have during the winter, this may be adequate to break this negative attitude. In the short-term, markets tend to overreact to the upside or, as in the present case, to the downside.
