Towing and the U.S. Economy

Here at Marcon, we are always trying to provide interesting information and articles on the towing industry. The towing industry can generally be broken down into four sections, including coastal, shipdocking, oilfield, or inland, with some overlap. The inland and oilfield sectors have always been easier to track with monthly statistical data available for analysis. The statistics available on the coastal towing and shipdocking sectors are usually years old by the time they are released, so we have to rely more on anecdotal information. In this article, we are attempting to provide some analysis of the current U.S. economy and its impact on the coastal towing and shipdocking businesses. We would appreciate your comments and thoughts on the issues facing companies operating in these sectors. The following is our take on some of the issues we have observed.

Depending on whom you believe, the U.S. economy is either getting better, worse, or remaining flat. At the macro level, we have low but rising interest rates, a flat stock market, high oil prices, high prices on other commodities, recently stagnant employment figures, rising costs for health insurance, moderate inflation and decent GDP growth, among other issues. The main uncertainties affecting the country are the presidential election, terrorism, the war in Iraq, and of course which way the economy is trending and how that will impact various sectors of the economy. Trying to predict how all these factors will play out over the coming months and years is near impossible, but here are some thoughts.

Following the stock market's decline in 2000 and the terrorist attacks of 2001, the Federal Reserve lowered interest rates to the lowest levels since the 1950's. The low interest rates have indirectly fueled more shipping of dry-bulk commodities and finished consumer goods since more borrowing has resulted in higher demand. Although most of this trade moves by ship, rather than tug and barge, more port calls help shipdocking companies, bunkering companies, etc. Consumer spending is the largest driver of growth in the US, making up about 66% of economic activity. Following the business spending boom of the late nineties, and subsequent bust in 2000, consumers took up the slack as lowered interest rates fueled growth in consumer spending, mostly in the form of borrowed money from new home loans, home equity loans and cash-out refinancings. Another source of new consumer spending has been Federal tax cuts, but this is much smaller when compared to the trillions of dollars of growth over the last few years in the mortgage markets. The economy cannot rely forever on increasing debt to drive growth. As interest rates have fallen, and credit standards have been reduced, consumers have been able to service greater amounts of debt with the same monthly incomes. Since interest rates are now rising, debt levels will only be able to grow as incomes rise enough to service

(Continued from page 1)

new debt. Even though interest rates are historically low, rates may double (go up 100%) or more in the next 1 to 2 years on short-term loans, even though long-term rates may rise only modestly (maybe 20 or 30%). The coming slowdown in new debt accumulation is generally a negative going forward until the economy reaches sustainability, with new jobs and wage growth (driven by higher productivity) strong enough to fuel consumer spending growth. According to the Federal Reserve, the economic stimulus applied through low interest rates, has taken hold and is now sustainable. Hopefully they are correct and there will not be a substantial slowdown caused by rising rates. If there is a slowdown in spending, this will of course be a negative for all sectors of the economy, including the coastal towing and shipdocking sectors. If the Federal Reserve has it right, business should continue to grow, but maybe slower.

The stock market has remained substantially flat for the last six months following a rebound of nearly 40% (based on the S&P 500 low set in early March of 2003). Current levels are now about the same as December 2003. A return to the crazy days of the late nineties is unlikely, but the market seems to currently reflect more realistic values. At present, this factor seems to be neutral for US economy and maritime industry. If the market can maintain or grow slowly, it shouldn't be a drag on growth or spending.

Higher oil prices affect our industry in many ways. High oil prices can cut demand for petroleum products and therefore

(Continued on page 12)

(Continued from page 11)

lead to fewer shipments and less demand for transportation. High oil prices also increase operating costs for maritime companies and their customers. But, this time around, demand for oil and petroleum products has not decreased in the US, so ship traffic may actually prove higher than last year. High oil prices are a drag on the overall US economy, since there is no greater efficiency or productivity gains to offset the higher costs. Depending on whom you believe, prices may soon reach their peak. If this happens, it may actually turn into a near-term boost for the US consumer, as prices drop and more money is freed up for spending on other goods. If we are lucky, we could get a boost toward the holiday season for consumer spending. This may work to offset the negative affects of higher interest rates. It is difficult to say if sustained high prices or a drop in prices are negative or positive for the towing industry, since various operators are affected in different ways.

High prices for other commodities such as steel, cement, and other metals, seem to be increasing the amount of materials shipped. Current data is difficult to obtain, but charter rates for bulk ships are through the roof. High steel prices have probably increased ship traffic through increased trade, but they have also substantially raised the cost of new construction or rebuilds. The price of steel has risen over 50% since 2003 and continues to rise. Marcon has seen the price of newbuild barges increased monthly this year. One 300' x 100' ocean barge in Southeast Asia had her price increased from around USD 2.2 million to USD 2.65 million during the spring of 2004 just due to steel costs. The same affect is also seen at US yards. With many US companies now building new tugs and OPA compliant barges, there is an affect, but spread over the useful life of the equipment, it may be small. Commodity prices will probably moderate going forward as demand slows. This may slow shipping activity in the months or years ahead.

Rising health insurance costs are negatively impacting nearly all sectors of the U.S. economy. Employers and employees have been faced each year with higher premiums for lowered benefits. Unfortunately, it seems unlikely that health insurance and health care costs will moderate any time soon. There doesn't seem to be a plan from government or industry to address this issue. The maritime industry is not immune to the affects of this trend. Proactive companies can take advantage of this problem by providing their employees with superior benefits to increase employee retention and attract qualified applicants seeking better benefits. The net affect of rising health insurance costs is smaller margins for companies and effectively lower wages for employees.

The impact on the coastal towing and shipdocking businesses from the presidential election in November is difficult to determine. Who becomes president will affect the operating climate for the maritime industry, especially when it comes to port security and the war on terrorism. Following the election, the economy should get a boost just from the election being over. The economy should also benefit from the removal of the increased risk of terrorist attacks leading up to the election.

Marcon would appreciate receiving your thoughts on issues that affect the U.S. coastal towing and shipdocking sectors.
