U.S. Oil & Gas—An EIA Analysis Brief

U.S. Energy Information Administration

The United States of America is the world's largest energy producer, consumer, and net importer. It also ranks eleventh worldwide in reserves of oil, sixth in natural gas, and first in coal. Information contained in this report is the best available as of April 2004 and is subject to change.

GENERAL BACKGROUND

As of mid-April 2004, the U.S. economy appeared to be recovering somewhat, with first quarter 2004 real growth in gross domestic product (GDP) of 5.0% (year-over-year). The U.S. Federal Reserve has maintained its interest rate target at an extremely low level (1.00%) in an effort to stimulate an economic recovery. At the same time, fiscal policy remains stimulatory, with the U.S. budget running large deficits. The U.S. unemployment rate was estimated at 5.7% in March, up 0.1 percentage points from February, with the economy adding 308,000 jobs during the month but even more people entering the job market. Real (inflation adjusted) U.S. gross domestic product (GDP) growth for 2003 is estimated at 3.1%, up from 2.4% real growth in 2002. For 2004, real growth is expected at 4.7%. The U.S. merchandise trade deficit is estimated at \$550 billion for 2003. The current account deficit now is running at about 5% of GDP, compared to 1.5% in 1997. During the past two years, the dollar has depreciated significantly against several major currencies, including the Euro and the Japanese Yen. In mid-May 2001, the Bush administration issued a series of energy policy recommendations as part of its new National Energy Policy Report, developed by a task force led by Vice President Dick Cheney. In April 2003, the U.S. House of Representatives voted on comprehensive energy legislation; a different Senate energy bill passed on July 31, 2003. As of mid-April 2004, the Congress had not yet passed the legislation.

OIL

According to the Oil and Gas Journal, the U.S. had 22.7 billion barrels of proved oil reserves as of January 1, 2004, eleventh highest in the world. These reserves are concentrated overwhelmingly (over 80%) in four states -- Texas (24% including the state's reserves in the Gulf of Mexico), Alaska (22%), Louisiana (20% including the state's reserves in the Gulf of Mexico), and California (19%, including the state's Federal Offshore reserves). U.S. proven oil reserves have declined by around 20% since 1990, with the largest single-year decline (1.6 billion barrels) occurring in 1991.
