The Marine Price Index

2005 has been a good year for Marcon International, Inc. with 62 vessels and barges sold or chartered plus five sales scheduled to close in January 2006. We have seen a general improvement in all of our markets. Listings carried on the books for years have been selling and, in some cases, at higher prices than expected. The availability of good quality second-hand workboats and barges is becoming scarce, especially in the United States.

Although economists continue to report low inflation, as measured by the Consumer Price Index (CPI), costs for marine operators to build, purchase and operate vessels and barges are climbing dramatically. The CPI measures inflation experienced by consumers day-to-day by comparing the current and base year cost of a "basket of goods and services" representative of purchases. This "basket of services" includes food, clothing, housing, transportation and other goods and services purchased on a regular basis. The "basket of goods" though for the marine industry and our theoretical "Marine Price Index" is obviously different than that for the normal urban consumer. The annual inflation numbers of 2, 3, 4 and 5%, as measured by a Consumer Price Index since 1984, cannot be applied to the marine industry – either domestically or abroad.

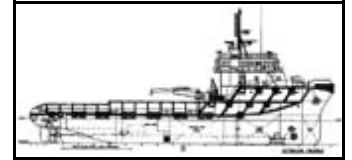

This was brought home on a personal level when I took the fire extinguishers from my own boat in for servicing. The cost of CO2 has gone up twice during 2005 plus there have been numerous surcharges for gases and dry chemicals over the year. In addition, fire extinguishers and servicing products are increasing an additional 18% in January 2006. Dr. Jeffrey Lacker, President of the U.S. Federal Reserve Bank of Richmond, at a recent Annual Economic Outlook Conference noted that inflation expectations remain contained, commenting that "we at the Fed are well-positioned to resist inflation pressures, should they emerge. So all in all, it is quite a good outlook. In fact, in the spirit of the holiday season, I am tempted to say that I bring you tidings of comfort and joy, but I am afraid that might strike you as uncharacteristically exuberant for a central banker, so let me just say that tidings appear to be improving at a measured pace". I am not sure whether an 18% increase for fire extinguishers is a "measured pace" and "contained", but maybe we should also be looking at other items in the marine industry's "basket of goods" such as steel, machinery, labor and bunkers.

K = Kort

(Continued from page 1)

Steel and machinery costs during 2004 and 2005 shot up dramatically, increasing newbuilding quotes from shipyards. One U.S. builder of large ocean deck barges recently reported paying above \$0.40 per pound for mill order black steel compared to \$0.17 per pound about two years ago. American Metal Market Research, in their November "North American Steel Markets Monthly" reported "domestic steel plate prices are remaining strong and steady, hovering around \$800/ton", up 25.2% over '05 and poised to increase in '06. Increasing U.S. steel prices are supported by post-hurricane reconstruction, as well as increasing demand for non-hurricane-related rebuilding of roads, bridges and other steel-intensive construction.

Both Nucor and Ipsco raised raw material surcharges on steel plate by \$40/ton for December, while Ipsco told customers that its published plate price would rise by \$20/ton in January 2006. Domestic lead times on product are also starting to stretch. Shipyards requiring wide-flange steel beams for vessel and barge construction from U.S.

mills are starting to have to order four months in advance and, if lead times continue to expand, mills could cut off orders booked too far in the future in order to discourage speculation.

Shipyards also report higher costs for machinery as suppliers absorb higher manufacturing costs plus recognize a tightening market due to the old equation of supply and demand. The propulsion package for a series of azimuthing tugs built overseas a year ago is now 17.5% higher. Main engines for several tugs scheduled to be built in 2006 at a U.S. shipyard increased 40% in just over a year and a half. While most deck equipment manufacturers seem to be keeping annual increases within 5 – 8%, a few are getting dollar signs in their eyes and asking 25% more for winches and related equipment.

Manning is a challenge both for shipyards and vessel operators. There is a shrinking capacity in U.S. Gulf Coast yards in the wake of Hurricanes Katrina and Rita – both in the reduced number of functioning yards ready-to-build and a shortage of qualified manpower to work at those yards. Thousands of people were displaced as wide swaths of housing was destroyed.

Many shipyards with backlogs in orders prior to Hurricanes Katrina and Rita, who first had their facilities shut down as a result of wind and water damage, are now trying to get by with only a portion of their workforce. One yard with 500 full time personnel prior to Katrina, reported only 320 employees showing up afterwards. In addition to the lack of housing and facilities, shipyards are having to compete with the Federal Emergency Management Agency (FEMA), offshore drillers and other industries hungry for employees. There is a limited pool of workers and it is not going to get any better soon. With Federal money targeted toward levee building and other flood control measures, construction and dredging companies will compete for this same pool of labor. Supply and demand strikes again. Higher wages and labor costs are first passed onto the shipyard and then to the customer. The limited workforce at the yards is needed not only to build new hulls and repair older vessels and barges, but also to make the repairs required to get the yards back on their feet. This reduces the capability of many shipyards to accept new orders, creating competition for available newbuilding slots and further adding to the cost of new construction.

While the U.S. Consumer Price Index for all items in our magical basket of goods and services, less food and energy, was only up 2% for the 12 months ending November 2005, the energy index was up 18%. While more of a factor to vessel operators than shipyards, the high cost of

fuel definitely has an inflationary affect on the materials, construction and supply of everything going into the building and repair of vessels and barges. Although world prices have eased, everyone still feels the cost. In February 2005 a ship owner would pay \$392.50 in Houston, \$427.50 in New York and \$381.50 in Singapore for a metric ton of marine diesel. As of 21 December, the same owner would pay \$550.00 (+40%), \$562.50 (+31.6%) and \$472.50 (+23.9%) in each of the respective ports. Fuel costs also affect the cost of operating on the inland river system. Kirby Corp. of Houston, for example, for their third quarter of 2005 paid an average of \$1.75 per gallon for diesel to operate their 243 inland river towboats compared to \$1.16 for the same period in 2004, an increase of 50.9%. Is this a measured and contained pace of inflation?

The last piece of the puzzle in the newbuilding cost equation is supply and demand of floating equipment itself – especially OPA'90 double skin tank barges in the U.S. Demand for quality equipment is up and supply is down which is likely to remain unchanged through the end of this decade. Marcon expects the equation and prices for OPA'90 barges to level off as we approach 2015, which is the retirement date for all single hull petroleum carrying tonnage in the U.S. In the meantime we expect newbuilding quotes to continue to rise and delivery times to stretch further out into the future, no matter if the quote is for a tug, barge or supply boat. Whether this is just a temporary "spike" in the market, or a longer term situation remains to be seen. Regardless, it is the situation that we all face today. Recent quotes for new double skin ocean tank barges in the U.S. have been 22–35% higher than in 2004, new 150–160' ocean deck barges from U.S. yards are abt. 20% higher and if you are thinking about building a 10–14,000dwt deck barge then you had better budget abt. 30% more than last year. Prices for U.S. flag shipdocking tugs have also increased with recent quotes up 16-20%.

Newbuilding costs are rising not only in the U.S., but overseas. Although steel prices have not seen the same dramatic increase in China due to surpluses from their mills, costs for their new barges are going up. The asking price for a new 18,500dwt deck barge in March 2005 was 40%+ higher than for the similar barge Marcon sold in April 2004, while the asking price for an identical unit scheduled to be delivered in August 2006 is an additional 40%+ higher yet. Quotes for new 7,500dwt barges out of Southeast Asia are 20% higher than those from December 2004. If global growth continues at the current rate, Marcon sees still higher prices for Chinese and Southeast Asian newbuildings after the first quarter of 2006.

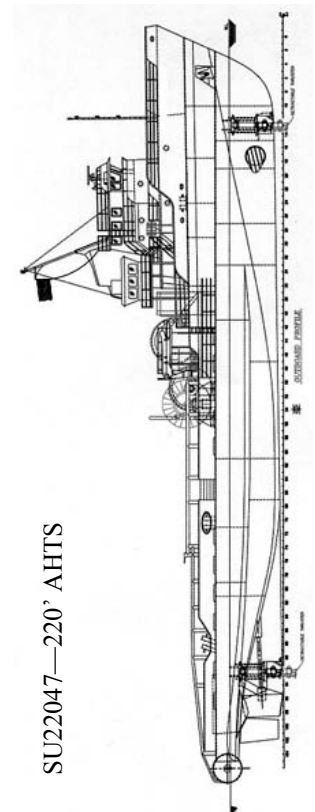

Whether it be for newbuilding or second-hand vessels and barges, buyers will have to pay more in 2006 for quality equipment, hoping they can pass it on to their customers through higher rates and/or longer term charters.

All of us here at Marcon International wish you a peaceful, healthy and prosperous New Year.
